What a Healthy Spring it has been!

Spring 2006 has turned out to be quite healthy for the QproQ staff. Our first beneficial dose of medicine started by assisting with Information Management Suite renovations at the Philadelphia Veterans Affairs Medical Center followed by RTU replacements at the Lehigh Valley Hospital. Our healthcare highlight for the quarter was the award of a prime design consultant open-end contract at the Tampa VA Medical Center. We hear that a measured quantity of Florida sunshine does wonders for the complexion. Another RTU installation at the Butler VAMC, and Education & Administration Additions and Renovations at the Philadelphia VAMC have resulted in a hale and hearty spring for the Firm.

We've heard that heavy lifting is good for one's health. In that regard, we have been doing our share for manufacturers. Projects ranging from equipment replacements to building additions and renovations have kept us busy at Cargill Meat Solutions, Dial Corporation, Fairchild Semiconductor Corporation, First Quality Nonwovens, Inc., Gentex Corporation, George Weston Bakeries, Inc., Lucent Technologies, Inc., Magee Rieter Automotive Systems, and Wise Snacks, Inc.

Finally, we are assisting with preservation of a historic bridge that we will update you on in future issues. Look for our feature article in the June 2006 PE Reporter published by the Pennsylvania Society of Professional Engineers.

Wishing you all the best.
